ACKNOWLEDGEMENT

ABSTRACT

Wasting food is a common problem in our society. Food waste is crucial since it can improve our environmental and economic sustainability. We have identified the use of web technology to reduce food waste and built a web application that allows restaurants and people to donate and share their leftover food with people who are in need. This website will enable users to register, log in, view items, add items, add items to the cart, remove an item from the cart, and log out. This website uses SQL storage and a real-time database. Any user in need can see all the food images donated by different users and add them to his or her cart.
